

Mammal Images Library Committee

Committee Members: B. Blood, E. J. Finck, D. G. Huckaby (Chair), B. Huffman, L. L. Master, J. Ryan, J. S. Scheibe, B. P. Tanis, B. M. Zinke.

Mission:

The American Society of Mammalogists first established the Mammal Slide Library in 1977 to provide low-cost slides of mammals principally for educational purposes. The name change to Mammal Images Library (MIL, ca. 2000) reflected the changes in ways that images of mammals are now stored and accessed, as digital images rather than as 35 mm slides. The Mammal Images Library is a nonprofit educational program of the American Society of Mammalogists with the goal of providing images of mammals for use in education worldwide. At the start of 2015 the library contained 2691 digital images representing 28 of 29 mammalian orders, 136 of 154 families, and 1256 of 5500+ species recognized in Wilson and Reeder (2005) and more recent authorities. The images also represent all continents. Images from the library have been used in more than 110,000 instances in 50+ countries. In addition to optical projection for nonprofit instruction, many of the images may be employed (with permission) for other purposes, including commercial uses.

Information Items:

(1) The MIL collection contains only digital images, both those taken originally as such and those scanned from 35 mm slides. A lower-resolution preview of each image of generally 660 x 440 pixels, suitable for some projection or web use, is available on the MIL web page (<http://www.mammalogy.org/image-library>) free of charge and without requiring permission. A copy of the higher resolution image, with or without the label (layer), is available upon request for most of the library. We usually charge a handling fee of \$5 for each high-resolution image sent for non-commercial purposes and a royalty (and handling) fee of \$50 each for commercial usage. Non-commercial users who plead poverty may have the fee waived. All fees now go to the general fund of the society.

(2) The primary focus of the MIL Committee remains making images available to individual users and organizations. During 2019, we provided 35 high-resolution images to 13 users. We have no record of the low-resolution images downloaded directly from the library on the ASM website.

(3) We added 985 new images to the MIL collection during 2019. Among these were 7 families, 2 subfamilies, 62 genera, and 250 species new to the collection (pages 2-4). In addition, we recognized some new taxa and lumped others, which brings the respective totals to 27 orders, 161 families, 863 genera, and 1998 species. These images include 3 subfamilies and families, 9 genera, and 22 species newly described or recognized since Wilson and Reeder (2005).

(4) At the end of 2019, the MIL collection lacked images of 3 families, 14 subfamilies, and ca. 69% of the 6495 species (pages 4-8) recognized in the ASM Mammal Diversity Database (<https://mammaldiversity.org/>). We encourage all interested parties to consider contributing their high-quality images to the MIL. Please review our holdings on the MIL web page (<http://www.mammalogy.org/image-library>) to determine if some images from your personal collection could improve the scope and quality of the collection. Anyone interested in submitting images should contact the committee chair.

(5) Starting in 2012, BP Tanis has provided mammal image postings on Mondays and Thursdays for ASM's Facebook, Google+, and Twitter (search for #MondayMammal and #MammalTrivia on our social media accounts).

(6) During 2019, no one joined or left the committee.

(7) This committee thanks the Department of Biological Sciences, California State University, Long Beach, for providing computer services and an office for the chair of this committee, without which maintenance of the library would have been much more difficult. These services include the use of a desk computer and advice and work by a computer technician.
